Zektor Announces Launch Of CAT5 Extenders

Zektor extenders drive maximum clarity and distance for A/V signals

Poway, CA – April 29, 2008 – Zektor proudly announces the release of their new line of premium quality patent pending CAT5 extenders.

“We are please to release our highly anticipated family of CAT5 extenders”, states Jeff Haynes, VP Sales and Marketing at Zektor. “As in all of our designs, what sets us apart from others is our robust quality and the unique features we include at very competitive price points”.

“Our network of long term customers provided us with real world issues that they deal with and we listened. We decided to delay the release of our extenders in order to utilize the very latest silicon offerings producing crystal clear images as well as digital and analog audio over one CAT5 cable” stated Zonn Moore, CTO and co-founder. “Zektor will be offering many different options for our Component video, HDMI and VGA offerings”, added Jeff Haynes.

Zektor products are available through independent representatives, dealers, installers and internet retailers across the U.S. and Internationally.
